AVINASH VEMULA

Software Engineer

WORK EXPERIENCE

OWIT Services Private Limited India [Software Engineer]

20 Aug 2018–Present

Client: Beazley Group, UK

Description: The application is an insurance product. It provides policy, claims and billing solutions for various customers in one place and the customer can choose his pass system and integrate it with the application.

Responsibilities and Challenges:

- Develop, test, implement and maintain application software.
- Preparing and producing releases of software component using Glass-Fish server.
- Identifying production and non-production application issues and fixing them.
- Experience in bit bucket code repository.
- Developing the new enhancements to the applications.
- Improved the performance for XML generation from 45 mins to 6 mins.
- Developed the Utility tool for the system to reflect the changes accordingly.
- Prepared the migration scripts for the new developing functionalities to the existing data using SQL server.
- Improving the performance of the report generation by identifying the queries. Closely worked with the QA team to fix all the bugs and made the code more stabilized.
- Created Stored procedures in SQL to update the given data to internal tables.
- Identified the amount difference in monthly reports and rounded from 2 decimal to 6 decimals.
